

# The RGPD (Data protection law)

## What is it?

It is very important that students are aware of the existence of the GDPR and the need to consider the protection of data in their products whether web or other products. As it is an important legal issue we can help our students, with a small intervention first to situate the concepts and regulations, and second to apply on the web this regulation that can change over time.

In this first video he explains in a very clear and concise way the main concepts of the 2017 GDPR.

### https://www.youtube.com/watch?v=heKapvVLjng

Once we have a little clearer concepts about the GDPR, let's see what we need to implement on our website to comply with the law.

I leave you with an informal post but that your reading opts to help students if they have to apply the GDPR on their website

Cookies policy: Everything you need to know

### Creation of RPDG documents for the web

To implement the cookie document on our website, we must generate 3 documents:

- 1. Cookies Policy Document
- 2. Privacy Document
- 3. Legal notice document

First we need to create the text of the 3 documents. That is why we will use a portal that provides us with a generating template, this portal is: <u>Zimree freelance (https://www.zimrre.com/legal-app/)</u>.

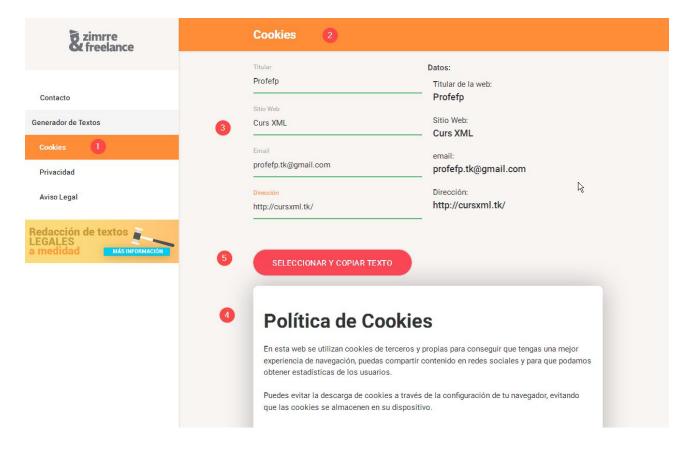

## 1.- Creation of the Text Document of the Cookies Policy

First we will generate the "Cookies Policy" document, both for this and the other two documents, we will use an online generator: Zimree freelance (https://www.zimrre.com/legal-app/), it will ask us for the details of the owner of the website and will generate a text document for us to upload to our portal so that users can be

informed as requested by the GDPR.

- 1. We choose the option to generate a Cookies Policy document.
- 2. We make sure to be in the cookies section.
- 3. We fill in the 4 details you ask us for. And it automatically replaces them in your template of the document you have on the same page with the title "Cookie Policy".
- 4. We will do the data combination with your template.
- 5. We can copy the text and paste it into a document that we will upload to our website.

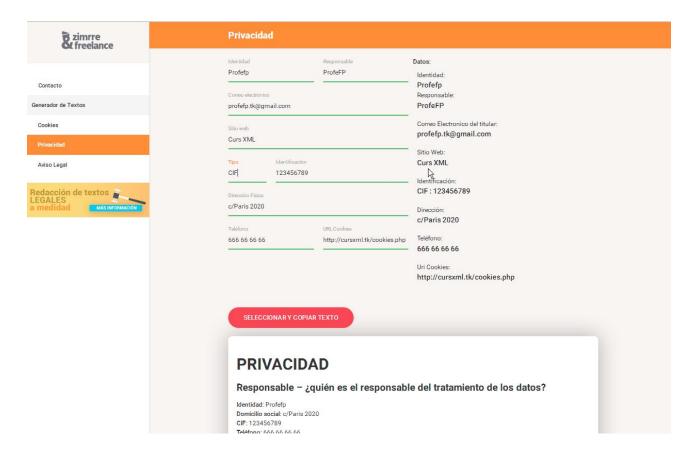

Once we have copied it if our portfolio is in Catalan we will go to Google Translate and translate it into Catalan and then paste it into a separate text document with a name that identifies it and upload it to our hosting.

## 2.- Creation of the Text Document of the Privacy Policy

Following the guidelines above we will create the "Privacy Policy" document

## 3.- Creació del Document de text d'Avís

Finally we will create the third "Notice" document.

Once we have the 3 texts already translated and saved as files, we will upload them to our

hosting so we can add them to our portfolio.

## 4.- Creation of the banner of acceptance of the "Cookies Policy"

Once we have the 3 documents, we must create the links for users to access this information, and on the other hand when the user enters our portfolio before continuing access must accept the cookies policy of the web. so once we have the documents we will now need to add and manage the acceptance banner.

You must include in the cover of your portfolio, the acceptance banner of the "Cookies Policy", so you can search the Internet for a proposal such as (Cookie Policy: Cookie Notice Banner) or generate one for your be careful, I propose this simple but useful. It consists of 3 parts that you need to put in place within your portfolio: CSS, Javascript and HTML.

#### **CSS**

```
<style>
cajacookies {
 box-shadow: 0px 0px 5px 5px #808080;
 background-color: #c1bdba ;
 color: white;
 padding: 12px;
 margin: auto;
 margin-bottom: 0px;
 position: fixed;
 top: 0px;
 width: 100%;
 text-align: center;
#cajacookies button {
 color: black;
#iniciar {
     float: right;
     position: relative;
     align-content: right;
     top: -45px;
     left: -5px;
.btn nou {
 padding: .25rem .25rem;
```

```
border-radius: .25rem;
background-color: #3399CC;
color: #fff;
vertical-align: middle;
transition: background-color .15s ease-in-out;
font-size:14px;
}
.btn_nou:hover, .btn-bootstrap:focus {
  background-color: #0069d9;
}
.btn_nou:active {
  background-color: #0062cc;
}
</style>
```

#### **Javascript**

```
function compruebaAceptaCookies() {
   if(localStorage.aceptaCookies == 'true') {
      cajacookies.style.display = 'none';
   }
}

/* aquí guardamos la variable de que se ha
aceptado el uso de cookies así no mostraremos
el mensaje de nuevo */
function aceptarCookies() {
   localStorage.aceptaCookies = 'true';
   cajacookies.style.display = 'none';
}

/* ésto se ejecuta cuando la web está cargada */
$(document).ready(function () {
   compruebaAceptaCookies();
});
```

#### **HTML**

```
<div id="cajacookies">

Aquest lloc web fa servir cookies, si continua navegant significa que
accepta el seu ús.
```

Pot llegir més sobre l'ús de cookies a la nostra <a href="cookies.php" target="blank"> política de galetes(Cookies) </a>.<br/>
<button onclick="aceptarCookies()" class="pull-right"><i class="fafa-times"></i> Acceptar i tancar aquest missatge </button>
<div id="condicions2" class="info" style="display:none; background-color: #ccccc;" >

#### The result will be like this:

## Ejercicio de HTML

#### Div inferior

Lorem ipsum dolor sit amet, consectetur adipisicing elit. Sequi sunt doloremque atque nulla ipsam quisquam modi dolores labore animi odio dolorum a quos, eos distinctio molestias eaque praesentium velit. Molestias!

#### Div inferior

Lorem ipsum dolor sit amet, consectetur adipisicing elit. Consectetur officiis praesentium sequi voluptatem quos dignissimos blanditiis, aliquid, vitae facilis cupiditate eos rem labore quia amet perspiciatis ratione distinctio quis facere.

#### Div inferior

Lorem ipsum dolor sit amet, consectetur adipisicing elit. Optio esse cupiditate maiores expedita autem voluptatum, tempore mollitia repellendus facere, sint, impedit at quasi beatae. Sint odit dolores in debitis, aut.

The proposal is that you incorporate the basic elements of the GDPR into your portfolio, without going into depth.
